Cryptography and Machine Learning - Homework 2

Due date: November 10, 2026. **Submission:** Via Moodle.

Question 1. Write two paragraphs of personal text describing what you learned in the last lecture. Focus on what you found important, surprising, or difficult, and explain it in your own words.

Include the following declaration verbatim at the end of your submission:

> "I hereby declare that I wrote the above paragraphs on my own"

Question 2. Start thinking about your course project. Go over the material we plan to cover in the course and assemble a team of between 3 and 5 students. Together, think of possible projects you would like to explore. It may be useful to have more than one option, but this is not required.

Schedule an office hour with me to discuss your options. You do not need to settle on a project before our meeting.

The project will be evaluated based on originality, scope, execution, and presentation. The last two lectures of the course will be devoted to project presentations.
